

Safety Solutions for Airport Barrier Systems

- FLEXIBLE SOLUTIONS FOR ALL TYPES OF SAFETY BARRIERS
- MEET AND EXCEED STRINGENT SAFETY STANDARDS
- COST EFFECTIVE INSTALLATIONS
- AVAILABLE WORLD WIDE

Safety Solutions for Airport Barrier Systems

Safety on the ground and in the air is paramount in the aviation industry. As an airport operator you have to make sure that your location conforms to the highest safety standards. This applies in a number of different areas: to passengers, the security of facilities and flight safety in equal measures.

Kee Safety, a leading global supplier of components and bespoke systems for railings, barriers, roof edge protection and fall prevention, can provide you with affordable, safe and reliable solutions.

Kee Safety systems have been installed at Heathrow, Gatwick, Charles de Gaulle, Rotterdam, Pittsburgh, Victoria BC, Frankfurt, Seattle and Vilnius airports to name just a few.

Kee Safety barrier systems conform to stringent global industry standards. The main components are TÜV certified for strength, manufacturing quality and consistency. Our railing systems

offer a cost effective alternative to traditional welded handrails. Construction requires only simple hand tools for installation, delivering up to **50% savings** in time and labour compared to traditional welded railings.

Kee Safety also offers a wide range of collective and personal fall protection systems for working at height. By using correctly installed and tested fall protection systems you can ensure the health and safety of anybody who is required to work on a roof.

Additionally, a temporary demarcation system is available to ensure any unforeseen hazards can be quickly and easily avoided.

Kee Safety is able to offer a complete design and installation service to give you the most cost effective solution to your needs and ensure all applications conform to the relevant standards.

Safety Barrier Systems

- **Widest range of components on the market**
- **KEE KLAMP** cast iron components for safety railings
- **KEE LITE** aluminium components for high corrosion resistant safety barriers
- **KEE ACCESS** components ensuring disability compliance for safety handrail solutions.
